<sup>1</sup> Trigger level is the sum of the base trigger level multiplied by the average quantity of imports during the three preceding years for which data are available and the absolute volume change in domestic consumption of the product concerned in the most recent year for which data are available compared to the preceding year.

<sup>2</sup> According to Article 5 of the Agreement on Agriculture, if domestic consumption is not taken into consideration, the trigger level shall be 1.25 times the average quantity of imports of the previous three years; and regardless of whether domestic consumption is taken into consideration, the trigger level shall not be less than 1.05 times the average quantity of imports of the previous three years. The trigger level of garlic bulb for planting, chicken legs and wings, other chicken cuts and dried shiitake should not be less than 105 percent of the average quantity of imports of the previous three years. The trigger level of rice, peanuts, pears, other garlic, dried garlic bulb, betel nuts, fresh milk, other liquid milk, fowl offal, red beans, pomelo, persimmon, dried day lilies and pork belly are calculated without taking domestic consumption factors into consideration.

<sup>3</sup> The trigger level of peanuts is calculated based on ground-nuts in shell. The imported volume of shelled ground-nuts, flours and meals of ground-nuts and ground-nuts oil should be converted into volume of ground-nuts in shell to accumulate the import quantity of peanuts. Conversion ratios of the above-mentioned goods into volume of ground-nuts in shell are specified in additional notes 3, Chapter 98 of the Customs Import Tariff.
