Notes:

1. **Average Nominal (Simple Average) Rate** is obtained by the sum of the tariff rates of all items being divided by the number of the items.
2. **Average Effective Rate** is obtained by the sum of the tariff revenue of all the items being divided by the total value of all the import goods.
3. **Trade Weighted Average Rate** =  $\frac{\sum(\text{tariff rate}) \times (\text{value of the import goods})}{\sum(\text{value of the import goods})}$ .
